## ULTRAFRAGOLA MIRROR WITH LED TUBE

### Data sheet

The lighting system is made by a single coextruded silicon neon-LED tube, enclosing two LED strips in the “Ultrafragola pink” (no driver RGB used). Thanks to the tube’s circular section the light perfectly diffused, without flickering or shade variations. Also the diffused brightness enables to enlighten evenly every “wave” of the mirror. The simplicity and the reduced components number of the system facilitates, when necessary, substitution or maintenance works.

### Important

Ultrafragola cannot be connected to a dimmer or any other device that serves to regulate and/or vary the intensity of light. The lighting system can only be inspected, repaired or replaced by an electrician, following the appropriate instructions provided by us. Any alteration and/or modification of the system, in any of its parts, which has not been authorised by Centro Studi Poltronova, will permanently interrupt the existing warranty on the product.

### Technical details

*Tension:* 100–240 V (US) / 220–240 V (EU)

*Led/Voltage:* 24 V

*Lumens:* 4000

*Power of device:* 75 W

*LED led lifespan:* > 25.000 h

*Color:* Ultrafragola Pink
